

ConTeXt installer package for the Mac

Oliver Buerschaper

Motivation

Motivation

- user-friendly installation experience

Motivation

- user-friendly installation experience
- switch between TeX distributions easily

Motivation

- user-friendly installation experience
- switch between TeX distributions easily
- „reference“ ConTeXt distribution on the Mac

Requirements

Requirements

- Mac OS X 10.4 Tiger (or later)

Requirements

- Mac OS X 10.4 Tiger (or later)
- Intel-based Mac

Requirements

- Mac OS X 10.4 Tiger (or later)
- Intel-based Mac
- TeX Live 2007 (or later)

Requirements

- Mac OS X 10.4 Tiger (or later)
- Intel-based Mac
- TeX Live 2007 (or later)
- latest TeXDist structure

Demo

Obstacles

Obstacles

- bugs in Apple Developer Tools

Obstacles

- bugs in Apple Developer Tools
- former configuration mechanism of LuaTeX

Obstacles

- bugs in Apple Developer Tools
- former configuration mechanism of LuaTeX
- lack of version control for ConTeXt sources

Future goals

Future goals

- public release

Future goals

- public release
- universal binaries

Future goals

- public release
- universal binaries
- optional install choices: core, engines, fonts, third-party modules, frontend support ...

Future goals

- public release
- universal binaries
- optional install choices: core, engines, fonts, third-party modules, frontend support ...
- more goodies

Future goals

- public release
- universal binaries
- optional install choices: core, engines, fonts, third-party modules, frontend support ...
- more goodies
- testing environment ...

Happy TeXing!
