<psNames>
  <!-- This file uses unique glyph names based on the information
        found in the 'post' table. Since these names might not be unique,
        we have to invent artificial names in case of clashes. In order to
        be able to retain the original information, we need a name to
        ps name mapping for those cases where they differ. That's what
        you see below.
        -->
